

# Namespace EasyTechToolUI

## Classes

### [CanvasTransitionManager](#)

EasyTechToolUI's top administrator is responsible for initializing, updating, and transition of pages

### [CanvasTransitionManagerBuffer](#)

A buffer that helps store and identify all CanvasTransitionManagers present in the program.

### [EdgyModulePrototype](#)

An abstract class that collects things to manage the UI module located at the bottom of the UI abstraction tree.

### [TransitionCanvasMonoBehaviour< TransitionCanvasCommonDataBuffer>](#)

Class that describe each page that is the subject of the screen

## Interfaces

### [CanvasTransitionManager.ITransitionEventSub](#)

Define the methods that must be implemented when each page is transition by the CanvasTransitionManager

### [IItemSelectedAction](#)

The interface defined by the method for processing when an item in the UI element is selected

### [IModuleStateUpdate](#)

Interface that defines the methods necessary to manage the UI module

# Class CanvasTransitionManager

Namespace: [EasyTechToolUI](#)

Assembly: EasyTechToolUI.dll

EasyTechToolUI's top administrator is responsible for initializing, updating, and transition of pages

```
public class CanvasTransitionManager : MonoBehaviour, IModuleStateUpdate
```

## Inheritance

[object](#) ← Object ← Component ← Behaviour ← MonoBehaviour ← CanvasTransitionManager

## Implements

[IModuleStateUpdate](#)

## Inherited Members

# Properties

## CanvasNames

```
public List<string> CanvasNames { get; }
```

### Property Value

[List](#) <[string](#)>

## CanvasTransitionEventSub

```
public Dictionary<string, CanvasTransitionManager.ITransitionEventSub>  
CanvasTransitionEventSub { get; }
```

### Property Value

[Dictionary](#) <[string](#), [CanvasTransitionManager.ITransitionEventSub](#)>

## CanvasTransitionManagerGuid

```
public Guid CanvasTransitionManagerGuid { get; }
```

### Property Value

[Guid](#)

## Canvases

```
public List<Canvas> Canvases { get; }
```

### Property Value

[List](#) <Canvas>

## CurCanvasIndex

```
public int CurCanvasIndex { get; }
```

### Property Value

[int](#)

## FirstScreenCanvasIndex

```
public int FirstScreenCanvasIndex { get; set; }
```

### Property Value

[int](#)

## PageTransitionControll

It refers to the EdgeModulePrototype for managing UI elements to be used for page transition

```
public EdgeModulePrototype PageTransitionControll { get; }
```

### Property Value

[EdgeModulePrototype](#)

## PrevCanvasName

```
public string PrevCanvasName { get; }
```

### Property Value

[string](#)

# Methods

## InitializeModule(in List<object>)

```
protected void InitializeModule(in List<object> moduleInitDataPerCanvas)
```

### Parameters

`moduleInitDataPerCanvas` [List](#) <[object](#)>

## InitializeModule(in object, in Guid)

You can call the module when you initialize it

```
public virtual void InitializeModule(in object moduleInitData, in Guid  
attachedCanvasTransitionManagerGuid)
```

### Parameters

`moduleInitData` [object](#)

This refers to custom data to be used when initializing modules. In some cases, null is also allowed

`attachedCanvasTransitionManagerGuid` [Guid](#)

This is the Guid of the CanvasTransitionManager to which the module belongs

## OpenCanvas(int)

Transition to canvas on the corresponding m\_canvas using the given int as index

```
public virtual void OpenCanvas(int canvasIndex)
```

### Parameters

`canvasIndex` [int](#)

Index of the page you want to switch to

## OpenCanvas(in int, in object)

```
protected void OpenCanvas(in int canvasIndex, in object moduleUpdateData)
```

### Parameters

canvasIndex [int](#)

moduleUpdateData [object](#)

## UpdateModuleState(in List<object>)

```
protected void UpdateModuleState(in List<object> moduleUpdateDataPerCanvas)
```

### Parameters

moduleUpdateDataPerCanvas [List](#) <[object](#)>

## UpdateModuleState(in object)

You can call the module when you updating it

```
public virtual void UpdateModuleState(in object moduleUpdateData)
```

### Parameters

moduleUpdateData [object](#)

This refers to custom data to be used when updating modules. In some cases, null is also allowed

# Interface

## CanvasTransitionManager.ITransitionEventSub

Namespace: [EasyTechToolUI](#)

Assembly: EasyTechToolUI.dll

Define the methods that must be implemented when each page is transition by the CanvasTransitionManager

```
public interface CanvasTransitionManager.ITransitionEventSub
```

## Methods

### InitializeAwake(in Guid)

The page that inherited ITransitionEventSub is called by the appropriate CanvasTransitionManager when it is initialized for the first time

```
void InitializeAwake(in Guid attachedCanvasTransitionManagerGuid)
```

## Parameters

attachedCanvasTransitionManagerGuid [Guid](#)

### OnTransition(in string)

Called when the screen switches to the page that inherited the corresponding ITransitionEventSub

```
void OnTransition(in string from)
```

## Parameters

from [string](#)

Name of the screen before it was switched to the current screen

# Class CanvasTransitionManagerBuffer

Namespace: [EasyTechToolUI](#)

Assembly: EasyTechToolUI.dll

A buffer that helps store and identify all CanvasTransitionManagers present in the program.

```
public static class CanvasTransitionManagerBuffer
```

## Inheritance

[object](#) ← CanvasTransitionManagerBuffer

## Inherited Members

[object.ToString\(\)](#), [object.Equals\(object\)](#), [object.Equals\(object, object\)](#),  
[object.ReferenceEquals\(object, object\)](#), [object.GetHashCode\(\)](#), [object.GetType\(\)](#),  
[object.MemberwiseClone\(\)](#)

## Properties

### CanvasTransitionManagerGuids

```
public static List<Guid> CanvasTransitionManagerGuids { get; }
```

## Property Value

[List](#) <[Guid](#)>

### CanvasTransitionManagers

```
public static List<CanvasTransitionManager> CanvasTransitionManagers { get; }
```

## Property Value

[List](#) <[CanvasTransitionManager](#)>

# Methods

## AddCanvasTransitionManager(in Guid, in CanvasTransitionManager)

Method to register a new CanvasTransitionManager

```
public static void AddCanvasTransitionManager(in Guid canvasTransitionManagerGuid, in CanvasTransitionManager canvasTransitionManager)
```

### Parameters

canvasTransitionManagerGuid [Guid](#)

Guid of the CanvasTransitionManager instance you wish to register

canvasTransitionManager [CanvasTransitionManager](#)

The CanvasTransitionManager instance you wish to register

## GetCanvasTransitionManager(in Guid)

Method that returns the corresponding CanvasTransitionManager according to the given Guid

```
public static CanvasTransitionManager GetCanvasTransitionManager(in Guid canvasTransitionManagerGuid)
```

### Parameters

canvasTransitionManagerGuid [Guid](#)

Guid corresponding to the CanvasTranstionManager you want to find

### Returns

[CanvasTransitionManager](#)

CanvasTransitionManager instance found via Guid. If there is no appropriate instance corresponding to Guid, null is returned

# Class EdgyModulePrototype

Namespace: [EasyTechToolUI](#)

Assembly: EasyTechToolUI.dll

An abstract class that collects things to manage the UI module located at the bottom of the UI abstraction tree.

```
public abstract class EdgyModulePrototype : MonoBehaviour, IModuleStateUpdate
```

## Inheritance

[object](#)  ← Object ← Component ← Behaviour ← MonoBehaviour ← EdgyModulePrototype

## Implements

[IModuleStateUpdate](#)

## Derived

[CirculatingLayoutItemList](#), [FreeLayoutItemPlane](#), [ItemGridPlane](#), [ItemViewList](#), [LayoutGroup](#), [SliderWrapper](#), [TransitionCanvasMonoBehaviour](#) < [TransitionCanvasCommonDataBuffer](#) >

## Inherited Members

MonoBehaviour.IsInvoking(), MonoBehaviour.CancelInvoke(), [MonoBehaviour.Invoke\(string, float\)](#) , [MonoBehaviour.InvokeRepeating\(string, float, float\)](#) , [MonoBehaviour.CancelInvoke\(string\)](#) , [MonoBehaviour.IsInvoking\(string\)](#) , [MonoBehaviour.StartCoroutine\(string\)](#) , [MonoBehaviour.StartCoroutine\(string, object\)](#) , [MonoBehaviour.StartCoroutine\(IEnumerator\)](#) , [MonoBehaviour.StartCoroutine\\_Auto\(IEnumerator\)](#) , [MonoBehaviour.StopCoroutine\(Enumerator\)](#) , MonoBehaviour.StopCoroutine(Coroutine), [MonoBehaviour.StopCoroutine\(string\)](#) , MonoBehaviour.StopAllCoroutines(), [MonoBehaviour.print\(object\)](#) , MonoBehaviour.destroyCancellationToken, MonoBehaviour.useGUILayout, MonoBehaviour.didStart, MonoBehaviour.didAwake, MonoBehaviour.runInEditMode, Behaviour.enabled, Behaviour.isActiveAndEnabled, [Component.GetComponent\(Type\)](#) , Component.GetComponent<T>(), [Component.TryGetComponent\(Type, out Component\)](#) , Component.TryGetComponent<T>(out T), [Component.GetComponent\(string\)](#) , [Component.GetComponentInChildren\(Type, bool\)](#) , [Component.GetComponentInChildren\(Type\)](#) , [Component.GetComponentInChildren<T>\(bool\)](#) , Component.GetComponentInChildren<T>(), [Component.GetComponentsInChildren\(Type, bool\)](#) , [Component.GetComponentsInChildren\(Type\)](#) , [Component.GetComponentsInChildren<T>\(bool\)](#) , [Component.GetComponentsInChildren<T>\(List<T>\)](#) , Component.GetComponentsInChildren<T>(), [Component.GetComponentsInChildren<T>\(List<T>\)](#) , [Component.GetComponentInParent\(Type, bool\)](#) , [Component.GetComponentInParent\(Type\)](#)

## Methods

### InitializeModule(in object, in Guid)

You can call the module when you initialize it

```
public abstract void InitializeModule(in object moduleInitData, in Guid
attachedCanvasTransitionManagerGuid)
```

#### Parameters

**moduleInitData** [object](#)<sup>↗</sup>

This refers to custom data to be used when initializing modules. In some cases, null is also allowed

**attachedCanvasTransitionManagerGuid** [Guid](#)<sup>↗</sup>

This is the Guid of the CanvasTransitionManager to which the module belongs

### UpdateModuleState(in object)

You can call the module when you updating it

```
public abstract void UpdateModuleState(in object moduleUpdateData)
```

#### Parameters

**moduleUpdateData** [object](#)<sup>↗</sup>

This refers to custom data to be used when updating modules. In some cases, null is also allowed

# Interface IItemSelectedAction

Namespace: [EasyTechToolUI](#)

Assembly: EasyTechToolUI.dll

The interface defined by the method for processing when an item in the UI element is selected

```
public interface IItemSelectedAction
```

## Methods

### OnItemSelected(in object, in bool)

Called when one of the UI elements to which the item belongs is selected

```
void OnItemSelected(in object itemData, in bool bisSelected)
```

## Parameters

**itemData** [object](#) 

A parameter seat for custom data that can be used as needed

**bisSelected** [bool](#) 

Indicates whether the current item has been selected

# Interface IModuleStateUpdate

Namespace: [EasyTechToolUI](#)

Assembly: EasyTechToolUI.dll

Interface that defines the methods necessary to manage the UI module

```
public interface IModuleStateUpdate
```

## Methods

### InitializeModule(in object, in Guid)

You can call the module when you initialize it

```
void InitializeModule(in object moduleInitData, in Guid attachedCanvasTransitionManagerGuid)
```

## Parameters

**moduleInitData** [object](#)

This refers to custom data to be used when initializing modules. In some cases, null is also allowed

**attachedCanvasTransitionManagerGuid** [Guid](#)

This is the Guid of the CanvasTransitionManager to which the module belongs

### UpdateModuleState(in object)

You can call the module when you updating it

```
void UpdateModuleState(in object moduleUpdateData)
```

## Parameters

**moduleUpdateData** [object](#)

This refers to custom data to be used when updating modules. In some cases, null is also allowed

# Class

## TransitionCanvasMonoBehaviour<\_TransitionCanvasCommonDataBuffer>

Namespace: [EasyTechToolUI](#)

Assembly: EasyTechToolUI.dll

Class that describe each page that is the subject of the screen

```
public abstract class TransitionCanvasMonoBehaviour<_TransitionCanvasCommonDataBuffer> :  
    EdgyModulePrototype, IModuleStateUpdate, CanvasTransitionManager.ITransitionEventSub where  
    _TransitionCanvasCommonDataBuffer : new()
```

### Type Parameters

[\\_TransitionCanvasCommonDataBuffer](#)

Dedicated data buffer for TransitionCanvasMonoBehaviour

### Inheritance

[object](#)  ← [Object](#) ← [Component](#) ← [Behaviour](#) ← [MonoBehaviour](#) ← [EdgyModulePrototype](#) ←  
[TransitionCanvasMonoBehaviour<\\_TransitionCanvasCommonDataBuffer>](#)

### Implements

[IModuleStateUpdate](#), [CanvasTransitionManager.ITransitionEventSub](#)

### Inherited Members

[MonoBehaviour.IsInvoking\(\)](#) , [MonoBehaviour.CancelInvoke\(\)](#) , [MonoBehaviour.Invoke\(string, float\)](#)  ,

## Properties

### AttachedCanvasTransitionManagerGuid

Guid for Canvas Transition Manager who manages the current page

```
public Guid AttachedCanvasTransitionManagerGuid { get; }
```

#### Property Value

[Guid](#)

### CommonDataBuffer

Reference to a dedicated data buffer for the current page

```
public static _TransitionCanvasCommonDataBuffer CommonDataBuffer { get; }
```

#### Property Value

[\\_TransitionCanvasCommonDataBuffer](#)

### EdgyModulePrototypes

This refers to the list of EdgyModulePrototypes for the management of UI elements on the current page

```
public List<EdgyModulePrototype> EdgyModulePrototypes { get; }
```

## Property Value

[List](#) <[EdgyModulePrototype](#)>

## Methods

### InitializeAwake(in Guid)

The page that inherited ITTransitionEventSub is called by the appropriate CanvasTransitionManager when it is initialized for the first time

```
public virtual void InitializeAwake(in Guid attachedCanvasTransitionManagerGuid)
```

## Parameters

attachedCanvasTransitionManagerGuid [Guid](#)

### InitializeModule(in List<object>)

```
protected void InitializeModule(in List<object> moduleInitDataPerSubModule)
```

## Parameters

moduleInitDataPerSubModule [List](#) <[object](#)>

### InitializeModule(in object, in Guid)

You can call the module when you initialize it

```
public override void InitializeModule(in object moduleInitData, in Guid attachedCanvasTransitionManagerGuid)
```

## Parameters

`moduleInitData` [object](#)

This refers to custom data to be used when initializing modules. In some cases, null is also allowed

`attachedCanvasTransitionManagerGuid` [Guid](#)

This is the Guid of the CanvasTransitionManager to which the module belongs

## OnTransition(in string)

Called when the screen switches to the page that inherited the corresponding ITransitionEventSub

```
public abstract void OnTransition(in string from)
```

### Parameters

`from` [string](#)

Name of the screen before it was switched to the current screen

## UpdateModuleState(in List<object>)

```
protected void UpdateModuleState(in List<object> moduleUpdateDataPerSubModule)
```

### Parameters

`moduleUpdateDataPerSubModule` [List](#) <[object](#)>

## UpdateModuleState(in object)

You can call the module when you updating it

```
public override void UpdateModuleState(in object moduleInitData)
```

### Parameters

moduleInitData [object](#)

# Namespace EasyTechToolUI.CirculatingLayout ItemList

```

### Parameters

**circulatingLayoutItemList** [CirculatingLayoutItemList](#)

**absoluteItemIndex** [int](#)

**itemInitData** [object](#)

## OnItemSelected(in object, in bool)

Called when one of the UI elements to which the item belongs is selected

```
public abstract void OnItemSelected(in object itemData, in bool bisSelected)
```

## Parameters

**itemData** [object](#)

A parameter seat for custom data that can be used as needed

**bisSelected** [bool](#)

Indicates whether the current item has been selected

## RemoveItem()

```
public virtual void RemoveItem()
```

## SelectItem(bool)

```
public virtual void SelectItem(bool bdoCanvasTransiton = false)
```

## Parameters

**bdoCanvasTransiton** [bool](#)

## UpdateItemState(in object)

```
public virtual void UpdateItemState(in object itemUpdateData)
```

## Parameters

**itemUpdateData** [object](#)

# MaxItemCountEventHandler

```
protected FreeLayoutItemPlane.MaxItemCountEvent MaxItemCountEventHandler { get; set; }
```

## Property Value

[FreeLayoutItemPlane.MaxItemCountEvent](#)

## Methods

### AddItem()

```
public virtual void AddItem()
```

### AddItem(in object)

```
protected void AddItem(in object itemInitData)
```

## Parameters

itemInitData [object](#)<sup>↗</sup>

### ClearItems()

```
public virtual void ClearItems()
```

### GetItemIndex(in Item)

```
public virtual int GetItemIndex(in FreeLayoutItemPlane.Item itemComponentClass)
```

## Parameters

itemComponentClass [FreeLayoutItemPlane.Item](#)

Returns

[int](#)

## InitializeModule(in List<object>)

```
protected void InitializeModule(in List<object> moduleInitDataPerItem)
```

Parameters

moduleInitDataPerItem [List](#) <[object](#)>

## InitializeModule(in object, in Guid)

You can call the module when you initialize it

```
public override void InitializeModule(in object moduleInitData, in Guid  
attachedCanvasTransitionManagerGuid)
```

Parameters

moduleInitData [object](#)

This refers to custom data to be used when initializing modules. In some cases, null is also allowed

attachedCanvasTransitionManagerGuid [Guid](#)

This is the Guid of the CanvasTransitionManager to which the module belongs

## RemoveItemAt(in int)

```
public virtual void RemoveItemAt(in int index)
```

## Parameters

index [int](#)

## UpdateModuleState(in List<object>)

```
protected void UpdateModuleState(in List<object> moduleUpdateDataPerItem)
```

## Parameters

moduleUpdateDataPerItem [List](#) <[object](#)>

## UpdateModuleState(in object)

You can call the module when you updating it

```
public override void UpdateModuleState(in object moduleUpdateData)
```

## Parameters

moduleUpdateData [object](#)

This refers to custom data to be used when updating modules. In some cases, null is also allowed

# Interface

## FreeLayoutItemPlane.IItemStateUpdate

Namespace: [EasyTechToolUI.FreeLayoutItemPlane](#)

Assembly: EasyTechToolUI.dll

```
public interface FreeLayoutItemPlane.IItemStateUpdate
```

## Methods

### InitializeItem(in FreeLayoutItemPlane, in object)

```
void InitializeItem(in FreeLayoutItemPlane freeLayoutItemPlane, in object itemInitData)
```

#### Parameters

freeLayoutItemPlane [FreeLayoutItemPlane](#)

itemInitData [object](#) 

### UpdateItemState(in object)

```
void UpdateItemState(in object itemUpdateData)
```

#### Parameters

itemUpdateData [object](#) 

# Class FreeLayoutItemPlane.Item

Namespace: [EasyTechToolUI.FreeLayoutItemPlane](#)

Assembly: EasyTechToolUI.dll

# Properties

## AttahcedFreeLayoutItemPlane

```
public FreeLayoutItemPlane AttahcedFreeLayoutItemPlane { get; }
```

### Property Value

[FreeLayoutItemPlane](#)

# Methods

## InitializeItem(in FreeLayoutItemPlane, in object)

```
public void InitializeItem(in FreeLayoutItemPlane freeLayoutItemPlane, in object itemInitData)
```

### Parameters

**freeLayoutItemPlane** [FreeLayoutItemPlane](#)

**itemInitData** [object](#)

## OnItemSelected(in object, in bool)

Called when one of the UI elements to which the item belongs is selected

```
public abstract void OnItemSelected(in object itemData, in bool bisSelected)
```

### Parameters

**itemData** [object](#)

A parameter seat for custom data that can be used as needed

**bisSelected** [bool](#)

Indicates whether the current item has been selected

## RemoveItem()

```
public virtual void RemoveItem()
```

## SelectItem(bool)

```
public virtual void SelectItem(bool bdoCanvasTransiton = false)
```

### Parameters

bdoCanvasTransiton [bool](#)

## UpdateItemState(in object)

```
public void UpdateItemState(in object itemUpdateData)
```

### Parameters

itemUpdateData [object](#)

# Delegate

## FreeLayoutItemPlane.MaxItemCountEvent

Namespace: [EasyTechToolUI.FreeLayoutItemPlane](#)

Assembly: EasyTechToolUI.dll

This event is called when item addition is faced on limit

```
public delegate void FreeLayoutItemPlane.MaxItemCountEvent()
```

# Namespace EasyTechToolUI.ItemGridPlane

## Classes

[ItemGridPlane](#)

[ItemGridPlane.Item](#)

Vector2Int

## ParentPlaneBaseSize

```
public Vector2 ParentPlaneBaseSize { get; }
```

## Property Value

Vector2

## Methods

### ClearItemPlane()

```
public virtual void ClearItemPlane()
```

### GetItemPos(in Item)

```
public virtual Vector2Int GetItemPos(in ItemGridPlane.Item itemComponentClass)
```

## Parameters

itemComponentClass [ItemGridPlane.Item](#)

## Returns

Vector2Int

### InitializeModule(in object, in Guid)

You can call the module when you initialize it

```
public override void InitializeModule(in object moduleInitData, in Guid  
attachedCanvasTransitionManagerGuid)
```

## Parameters

`moduleInitData` [object](#)

This refers to custom data to be used when initializing modules. In some cases, null is also allowed

`attachedCanvasTransitionManagerGuid` [Guid](#)

This is the Guid of the CanvasTransitionManager to which the module belongs

## InitializeModule(in object[,])

```
protected void InitializeModule(in object[,] moduleInitDataPerItem)
```

## Parameters

`moduleInitDataPerItem` [object](#)[,]

## ResizeItemPlane(in Vector2Int)

```
public virtual void ResizeItemPlane(in Vector2Int newItemPlaneSize)
```

## Parameters

`newItemPlaneSize` Vector2Int

## UpdateModuleState(in object)

You can call the module when you updating it

```
public override void UpdateModuleState(in object moduleUpdateData)
```

## Parameters

moduleUpdateData [object](#)

This refers to custom data to be used when updating modules. In some cases, null is also allowed

## UpdateModuleState(in object[,])

```
protected void UpdateModuleState(in object[,] moduleUpdateDataPerItem)
```

## Parameters

moduleUpdateDataPerItem [object](#)[,]

# Enum

## ItemGridPlane.AbstractItemPlacementRegulation

# Properties

## AttachedCanvasTransitionManagerGuid

```
public Guid AttachedCanvasTransitionManagerGuid { get; }
```

Property Value

[Guid](#)

## CurSelectedItemIndex

```
public int CurSelectedItemIndex { get; set; }
```

Property Value

[int](#)

## ItemCount

```
public int ItemCount { get; }
```

Property Value

[int](#)

## Items

```
public List<ItemViewList.Item> Items { get; }
```

Property Value

[List](#) <[ItemViewList.Item](#)>

# Methods

## AddItem()

```
public virtual void AddItem()
```

## AddItem(in object)

```
protected void AddItem(in object itemInitData)
```

## Parameters

itemInitData [object](#)

## ClearItems()

```
public virtual void ClearItems()
```

## GetItemIndex(in Item)

```
public virtual int GetItemIndex(in ItemViewList.Item itemComponentClass)
```

## Parameters

itemComponentClass [ItemViewList.Item](#)

## Returns

[int](#)

## InitializeModule(in object, in Guid)

You can call the module when you initialize it

```
public override void InitializeModule(in object moduleInitData, in Guid
attachedCanvasTransitionManagerGuid)
```

## Parameters

`moduleInitData` [object](#)

This refers to custom data to be used when initializing modules. In some cases, null is also allowed

`attachedCanvasTransitionManagerGuid` [Guid](#)

This is the Guid of the CanvasTransitionManager to which the module belongs

## InitializeModule(in object[])

```
protected void InitializeModule(in object[] moduleInitDataPerItem)
```

## Parameters

`moduleInitDataPerItem` [object](#)[]

## RemoveItemAt(in int)

```
public virtual void RemoveItemAt(in int index)
```

## Parameters

`index` [int](#)

## UpdateModuleState(in object)

You can call the module when you updating it

```
public override void UpdateModuleState(in object moduleUpdateData)
```

## Parameters

`moduleUpdateData` [object](#)

This refers to custom data to be used when updating modules. In some cases, null is also allowed

## UpdateModuleState(in object[])

```
protected void UpdateModuleState(in object[] moduleUpdateDataPerItem)
```

## Parameters

`moduleUpdateDataPerItem` [object](#)[]

# Interface ItemViewList.ItemStateUpdate

Namespace: [EasyTechToolUI.ItemViewList](#)

Assembly: EasyTechToolUI.dll

Interface that defines methods for managing items in the UI module

```
public interface ItemViewList.IItemStateUpdate
```

## Methods

### InitializeItem(in ItemViewList, in object)

Method for initializing items in the UI module

```
void InitializeItem(in ItemViewList itemViewList, in object itemInitData)
```

## Parameters

**itemViewList** [ItemViewList](#)

Instance of ItemViewList where the current item is placed

**itemInitData** [object](#) 

Parameters place in custom data that can be used to initialize the current item. Null is also possible if desired

### UpdateItemState(in object)

A method that can be invoked when updating the status of the current item

```
void UpdateItemState(in object itemUpdateData)
```

## Parameters

**itemUpdateData** [object](#) 

A parameter spot for custom data that can be used to update the status of the current item. Null is also possible if desired

# Class ItemViewList.Item

Namespace: [EasyTechToolUI.ItemViewList](#)

Assembly: EasyTechToolUI.dll

Classes describing items for ItemViewList

```
public abstract class ItemViewList.Item : MonoBehaviour, ItemViewList.IItemStateUpdate,
    IItemSelectedAction
```

## Inheritance

[object](#)  ← Object ← Component ← Behaviour ← MonoBehaviour ← ItemViewList.Item

## Implements

[ItemViewList.IItemStateUpdate](#), [IItemSelectedAction](#)

## Inherited Members

# Properties

## AttahcedItemViewList

A reference to the ItemViewList instance where the current item is placed.

```
public ItemViewList AttahcedItemViewList { get; }
```

## Property Value

[ItemViewList](#)

# Methods

## InitializeItem(in ItemViewList, in object)

Method for initializing items in the UI module

```
public virtual void InitializeItem(in ItemViewList itemViewList, in object itemInitData)
```

## Parameters

**itemViewList** [ItemViewList](#)

Instance of ItemViewList where the current item is placed

**itemInitData** [object](#) 

Parameters place in custom data that can be used to initialize the current item. Null is also possible if desired

## OnItemSelected(in object, in bool)

Called when one of the UI elements to which the item belongs is selected

```
public abstract void OnItemSelected(in object itemData, in bool bisSelected)
```

## Parameters

`itemData` [object](#)

A parameter seat for custom data that can be used as needed

`isSelected` [bool](#)

Indicates whether the current item has been selected

## RemoveItem()

Method called when you want to remove the current item from ItemViewList

```
public virtual void RemoveItem()
```

## SelectItem(bool)

Method called when you want to select the current item in ItemViewList

```
public virtual void SelectItem(bool bdoCanvasTransiton = false)
```

## Parameters

`bdoCanvasTransiton` [bool](#)

## UpdateItemState(in object)

A method that can be invoked when updating the status of the current item

```
public virtual void UpdateItemState(in object itemUpdateData)
```

## Parameters

`itemUpdateData` [object](#)

A parameter spot for custom data that can be used to update the status of the current item. Null is also possible if desired

## EdgyModulePrototypes

```
public List<EdgyModulePrototype> EdgyModulePrototypes { get; }
```

### Property Value

[List](#) <[EdgyModulePrototype](#)>

## Methods

### InitializeModule(in object, in Guid)

You can call the module when you initialize it

```
public override void InitializeModule(in object moduleInitData, in Guid  
attachedCanvasTransitionManagerGuid)
```

### Parameters

**moduleInitData** [object](#)

This refers to custom data to be used when initializing modules. In some cases, null is also allowed

**attachedCanvasTransitionManagerGuid** [Guid](#)

This is the Guid of the CanvasTransitionManager to which the module belongs

### UpdateModuleState(in object)

You can call the module when you updating it

```
public override void UpdateModuleState(in object moduleUpdateData)
```

### Parameters

`moduleUpdateData` [object](#)

This refers to custom data to be used when updating modules. In some cases, null is also allowed

# Properties

## AttachedCanvasTransitionManagerGuid

```
public Guid AttachedCanvasTransitionManagerGuid { get; }
```

### Property Value

[Guid](#)

## BdoLayoutGroupTransition

If true, each LayoutGroup is treated as if it were a separate page. However, if false, each LayoutGroup is treated as if it is a UI area belonging to one page.

```
public bool BdoLayoutGroupTransition { get; }
```

### Property Value

[bool](#)

### Remarks

If false, UpdateModuleState() of all modules of all LayoutGroup is called. At this time, the object parameter is filled with the value of the slider, so each module will need appropriate code to process this.

## CurSliderValue

```
public int CurSliderValue { get; set; }
```

### Property Value

[int](#)

# MaxSliderValue

```
public int MaxSliderValue { get; set; }
```

## Property Value

[int](#)

# Option

```
public SliderWrapper.SliderWrapperOption Option { get; set; }
```

## Property Value

[SliderWrapper.SliderWrapperOption](#)

# Methods

## ExcuteOtherInstruction(in int)

```
protected abstract void ExcuteOtherInstruction(in int value)
```

## Parameters

value [int](#)

## InitializeModule(in object, in Guid)

You can call the module when you initialize it

```
public override void InitializeModule(in object moduleInitData, in Guid  
attachedCanvasTransitionManagerGuid)
```

## Parameters

`moduleInitData` [object](#)

This refers to custom data to be used when initializing modules. In some cases, null is also allowed

`attachedCanvasTransitionManagerGuid` [Guid](#)

This is the Guid of the CanvasTransitionManager to which the module belongs

## OnSliderValueChanged()

This method must be added to Slider's onValueChanged event

```
public void OnSliderValueChanged()
```

# Enum SliderWrapper.SliderWrapperOption

Namespace: [EasyTechToolUI.SliderWrapper](#)

Assembly: EasyTechToolUI.dll

```
public enum SliderWrapper.SliderWrapperOption : byte
```

## Fields

```
ForCanvasTransition = 1
```

```
ForLayoutGroupUpdate = 2
```

```
ForOtherInstruction = 3
```

```
NpOption = 0
```
